

# Flow-360

01

## Comprehensive Tracking

FLOW 360 tracks raw material through the entire supply chain—mines, ports, plants—capturing detailed data at each stage, including truck details, quality parameters, and observation reports.

02

## Process Quality Analysis

At each stage—loading, receiving, processing, and finishing—the system records quality parameters and test results from both in-plant and external labs for thorough quality control

03

## Finish Goods & Dispatch

The system manages raw materials to finished goods, tracking offer quantities, lot numbers, and quality tests before dispatching to the port and loading onto vessels.

04

## Portal & Dashboard

The portal provides real-time updates and alerts via email and WhatsApp, with detailed reports, weather conditions, and truck parameters. The dashboard includes historical data, analytics, and comparisons.

05

## Data & Analytics

The dashboard offers historical data, analytics for plants, ports, and mines, transporter comparisons, and in-process analysis, with options to download reports and view finished product details.
